

Sugie Seito is committed to developing products that are necessary for sustainable infrastructure and society, while creating a safe and comfortable work environment.

## Providing a Comfortable Working Environment

The working environment in which we spend most of the time every day has a great impact on our lives. We aim to provide a safe and comfortable working environment for our employees so that they can lead healthful lives.

## Constructing a Resilient Infrastructure

We are determined to contribute to the construction, strengthening, and maintenance of a more resilient infrastructure by providing our pipeline technology, which has been cultivated in a country that is prone to natural disasters such as typhoons and earthquakes, not only in Japan but also overseas.

## Contributing to City Development that Transcends Generations

Our product, which is resistant to disasters and utilizes the characteristics of ceramics, will contribute to the development of comfortable cities by enhancing the disaster prevention function of society in more places and facilities, including the infrastructure of new industries that will start in the future.
